

Final Grade Calculator

User Guide | QuickerGrade

What it does

The Final Grade Calculator tells you exactly what you need on your final exam. Enter your current grade, the grade you want, and how much the final counts - it shows the score you must earn on the final. Free, no signup, runs entirely in your browser.

How to use it

- **1. Enter your Current grade.** Your grade so far, as a percentage (0-100).
- **2. Enter your Desired grade.** The final course grade you want, as a percentage.
- **3. Enter the Final weight.** How much the final exam counts, as a percentage (for example, 50).
- **4. Read the result.** The required final-exam score updates live as you type.

Formula

$$\text{Required Final} = (\text{Desired} - \text{Current} \times (1 - \text{Exam Weight})) / \text{Exam Weight}$$

Worked example

Current 85%, desired 90%, final worth 50% (weight 0.50).

Required = $(90 - 85 \times 0.50) / 0.50 = (90 - 42.50) / 0.50 = 95\%$.

You need 95% on the final to finish with 90%.

Tips

- **Over 100% means out of reach.** If the answer tops 100%, the target cannot be hit on the final alone.
- **Weight as a percent.** Enter 50 for a final worth half your grade, not 0.50.
- **Already there?** If your current grade already secures the target, the calculator says so.
- **Private.** Nothing is uploaded or saved - everything runs in your browser.
