

High School GPA Calculator

User Guide | [QuickerGrade](#)

What it does

The High School GPA Calculator handles regular, Honors, and AP courses. Pick each course's type and grade - it shows your weighted and unweighted GPA side by side, the way high schools and colleges look at them. Free, no signup, runs entirely in your browser.

How to use it

- **1. Add a course.** Type the course name (optional).
- **2. Pick the Type.** Choose Regular, Honors, or AP for each course.
- **3. Pick the Grade and Credits.** Letter grade plus credit hours, like a normal GPA calculator.
- **4. Read both GPAs.** Weighted and unweighted update live as you type.

Formula

Honors adds 0.5 and AP adds 1.0 to grade points. F stays 0 in every type.

Worked example

AP English A (1 credit) and Regular Math B (1 credit).

Weighted = $(5.0 + 3.0) / 2 = 4.00$. Unweighted = $(4.0 + 3.0) / 2 = 3.50$.

Tips

- **Know your school's scale.** Most schools use +0.5 Honors / +1.0 AP - that is what this calculator uses.
- **Colleges look at both.** Weighted rewards tough courses; unweighted shows raw performance.
- **F stays 0.** No bump applies to a failing grade, in any course type.
- **Private.** Nothing is uploaded or saved - everything runs in your browser.
