

Semester Grade Calculator

User Guide | [QuickerGrade](#)

What it does

The Semester Grade Calculator shows your semester GPA - and your new cumulative GPA. Enter this semester's courses, then add your previous GPA to see where you stand overall. Free, no signup, runs entirely in your browser.

How to use it

- **1. Enter this semester's courses.** For each course: letter grade and credit hours.
- **2. Read your semester GPA.** It updates live as you type.
- **3. Add your previous GPA (optional).** Enter your previous cumulative GPA and total credits.
- **4. Read your new cumulative GPA.** Your prior record blends with this semester instantly.

Formula

Semester GPA = (Grade Points x Credits + ...) / Semester Credits

Worked example

This semester: 3.60 GPA on 15 credits. Previous: 3.20 on 30 credits.

New cumulative = $(3.60 \times 15 + 3.20 \times 30) / 45 = (54 + 96) / 45 = 150 / 45 = 3.33$.

Tips

- **Skip the past if you like.** Leave previous GPA blank for a semester-only result.
- **Credits must match.** Use total earned credits for the previous GPA, not just one term.
- **Plan ahead.** Enter planned courses with target grades to preview next semester.
- **Private.** Nothing is uploaded or saved - everything runs in your browser.
