

Weighted Grade Calculator

User Guide | QuickerGrade

What it does

The Weighted Grade Calculator blends scores that count differently. Enter each score and its weight - homework, quizzes, tests, projects - and it shows your true weighted grade plus the letter grade. Free, no signup, runs entirely in your browser.

How to use it

- **1. Enter a Score.** Type each score as a percentage (0-100).
- **2. Enter its Weight.** Type how much it counts toward your final grade, as a percent.
- **3. Add or remove rows.** Add rows for every graded item; remove one to drop it.
- **4. Read your result.** Your weighted grade and letter grade update live as you type.

Formula

$$\text{Weighted Grade} = (\text{Score1} \times \text{Weight1} + \text{Score2} \times \text{Weight2} + \dots) / \text{Total Weight}$$

Worked example

Scores: 90% with weight 20, and 80% with weight 30.

Weighted Grade = $(90 \times 20 + 80 \times 30) / 50 = 4,200 / 50 = 84.00\%$ -> Grade B.

Tips

- **Weights are flexible.** They do not need to total 100 - the math adjusts automatically.
- **Match your syllabus.** Use the exact category weights your course uses for a true grade.
- **Red box?** That entry is invalid. Fix it and the calculation resumes.
- **Private.** Nothing is uploaded or saved - everything runs in your browser.
